MERCOSUR NOTES

HS code	Description	EU proposal	Mercosur proposal
<a href="#">[1]</a>	For the special conditions relating to "specific processes", see Introductory Notes 7.1 and 7.3.	(1)	Chemical reaction: is a process (including a biochemical process) which results in a molecule with a new structure by breaking intramolecular bonds and by forming new intramolecular bonds or by altering the spatial arrangement of atoms in a molecule.
<a href="#">[2]</a>	For the special conditions relating to "specific processes", see Introductory Note 7.2.	(2)	Mixtures: is a deliberate and proportionally controlled mixing of materials to conform to predetermined specifications, which cannot be performed as a single formula, and that results in the production of a good having properties different from the input materials is to be considered to be origin conferring, however the addition, whether or not in combination, of diluents only or of the additives enumerated is to be disregarded in determining the origin of the good.
<a href="#">[3]</a>	For the special conditions relating to "specific processes", see Introductory Note 7.2.	(3)	Purification: is the elimination of existing impurities for one or more separation processes, according to predetermined specifications, considering impurities as substances in which the association with a new chemical compound, results, exclusive and directly, from the production process. These substances can be originated from any of the essential production components as: a) input products not converted; b) impurities contained in the input products; c) reagents used in the production process; and, d) subproducts.
<a href="#">[4]</a>	For the special conditions relating to "specific processes", see Introductory Note 7.2.	(4)	Milling, pulverization and micronization: The deliberate and controlled reduction in particle size of a good, resulting in a good having a defined particle size, defined particle size distribution or defined surface area, which can modify the use or the operational outwork.

HS code	Description	EU proposal	Mercosur proposal
<a href="#">[5]</a>	For the special conditions relating to "specific processes", see Introductory Notes 7.1 and 7.3.	(5)	Standard materials: are preparations suitable for analytical, calibrating or referencing uses having precise degrees of purity or proportions which are certified by the manufacturer. The production of standard materials is to be considered as origin conferring.
<a href="#">[6]</a>	For the special conditions relating to "specific processes", see Introductory Notes 7.1 and 7.3.	(6)	Isomer Separation: The isolation or separation of isomers from a mixture of isomers is to be considered as origin conferring.
<a href="#">[7]</a>	For the special conditions relating to "specific processes", see Introductory Notes 7.1 and 7.3.	(7)	Minimal operations or processes: The following operations or processes are not considered to be minimal operation or process: Dissolution (included dissolution and dissolution concentration); Dissection; Hydration / Dehydration: addition of water molecules from crystallisation in dehydrated substances or elimination of water molecules from hydrated substances; Crystallisation or Recrystallisation, except the elimination of impurities; Addition of antipowder, stabilizers, colouring matters and fragrances, which are relevant to the purposes or uses to facilitate the identification of the good or for security reasons in transport or handle chemicals properly, since the addition of these products makes the resulting product suitable for specific uses; Change of the physical state; Put up in forms or packings for use solely for direct domestic health purposes.

<a href="#">[8]</a>	For the special conditions relating to "specific processes", see Introductory Notes 7.1 and 7.3.	(*)Thus understood as a chemical reaction are processes (including biochemical processes) that result in a molecule with a new structure by breaking intramolecular bonds and by forming new intramolecular bonds, or by altering the spatial arrangement of the atoms in the molecule.	
<a href="#">[9]</a>	For the special conditions relating to "specific processes", see Introductory Notes 7.1 and 7.3.		
<a href="#">[10]</a>	Note 3 to Chapter 32 says that these preparations are those of a kind used for colouring any material or used as ingredients in the manufacture of colouring preparations, provided that they are not classified in another heading in Chapter 32.		
<a href="#">[11]</a>	For the special conditions relating to "specific processes", see Introductory Notes 7.1 and 7.3.		
<a href="#">[12]</a>	In the case of the products composed of materials classified within both headings 3901 to 3906, on the one hand, and within headings 3907 to 3911, on the other hand, this restriction only applies to that group of materials which predominates by weight in the product.		
<a href="#">[13]</a>	The following foils shall be considered as highly transparent: foils, the optical dimming of which, measured according to ASTM-D 1003-16 by Gardner Hazemeter (i.e. Hazefactor), is less than 2%.
